## INDEPENDENT ASSURANCE REPORT

To the management of Asseco Data Systems S.A. ("ADS"):

### Scope

We have been engaged, in a reasonable assurance engagement, to report on *ADS - Management's Assertion 2025\_SSL EV* that for its Certification Authority (CA) operations in Szczecin, Poland, and supporting facilities in Łódź, Poland, throughout the period February 11, 2024 to February 10, 2025 for its CAs as enumerated in Attachment A, ADS has:

- ▶ disclosed its extended validation SSL ("EV SSL") certificate lifecycle management business practices in its:
  - [Certification Practice Statement version 7.11](#); and
  - [Certification Policy version 5.1](#)
- including its commitment to provide EV SSL certificates in conformity with the CA/Browser Forum Guidelines on the ADS website, and provided such services in accordance with its disclosed practices
- ▶ maintained effective controls to provide reasonable assurance that:
  - the integrity of keys and EV SSL certificates it manages is established and protected throughout their lifecycles; and
  - EV SSL subscriber information is properly authenticated (for the registration activities performed by ADS)

in accordance with the [WebTrust Principles and Criteria for Certification Authorities - Extended Validation SSL v1.8](#).

ADS makes use of external registration authorities for specific subscriber registration activities as disclosed in ADS's business practices. Our examination did not extend to the controls exercised by these external registration authorities.

### Certification authority's responsibilities

ADS's Management is responsible for its assertion, including the fairness of its presentation, and the provision of its described services in accordance with the WebTrust Principles and Criteria for Certification Authorities - Extended Validation SSL v1.8.

### Our independence and quality management

We have complied with the independence and other ethical requirements of the *Code of Ethics for Professional Accountants* issued by the International Ethics Standards Board for Accountants, which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behavior.

The firm applies International Standard on Quality Management (ISQM) 1, *Quality Management for Firms that Perform Audits or Reviews of Financial Statements, or Other Assurance or Related Services Engagements* which requires the firm to design, implement and operate a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Building a better  
working world

## Practitioner's responsibilities

Our responsibility is to express an opinion on management's assertion based on our procedures. We conducted our procedures in accordance International Standard on Assurance Engagements 3000 (Revised), *Assurance Engagements Other than Audits or Reviews of Historical Financial Information*, issued by the International Auditing and Assurance Standards Board. This standard requires that we plan and perform our procedures to obtain reasonable assurance about whether, in all material respects, management's assertion is fairly stated, and, accordingly, included:

- 1) obtaining an understanding of ADS's EV SSL certificate lifecycle management business practices, including its relevant controls over the issuance, renewal, and revocation of EV SSL certificates;
- 2) selectively testing transactions executed in accordance with disclosed EV SSL certificate lifecycle management practices;
- 3) testing and evaluating the operating effectiveness of the controls; and
- 4) performing such other procedures as we considered necessary in the circumstances.

ADS management has disclosed to us the attached matters (Attachment B) that have been posted publicly in the online forums of the Bugzilla site, as well as the online forums of individual internet browsers that comprise the CA/Browser Forum. We have considered the nature of these comments in determining the nature, timing, and extent of our procedures.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

The relative effectiveness and significance of specific controls at ADS and their effect on assessments of control risk for subscribers and relying parties are dependent on their interaction with the controls, and other factors present at individual subscriber and relying party locations. We have performed no procedures to evaluate the effectiveness of controls at individual subscriber and relying party locations.

## Inherent limitations

There are inherent limitations in the effectiveness of any system of internal control, including the possibility of human error and the circumvention of controls. For example, because of their nature, controls may not prevent, or detect unauthorised access to systems and information, or failure to comply with internal and external policies or requirements. Also, the projection to the future of any conclusions based on our findings is subject to the risk that controls may become ineffective.

## Opinion

In our opinion, throughout the period February 11, 2024 to February 10, 2025, ADS management's assertion, as referred to above, is fairly stated, in all material respects, in accordance with the WebTrust Principles and Criteria for Certification Authorities - Extended Validation SSL v1.8.

This report does not include any representation as to the quality of ADS's services beyond those covered by the WebTrust Principles and Criteria for Certification Authorities - Extended Validation SSL v1.8, nor the suitability of any of ADS's services for any customer's intended purpose.

Building a better  
working world

### Use of the WebTrust seal

ADS's use of the WebTrust for Certification Authorities - Extended Validation SSL Seal constitutes a symbolic representation of the contents of this report and it is not intended, nor should it be construed, to update this report or provide any additional assurance.

## ASSECO DATA SYSTEMS S.A. MANAGEMENT'S ASSERTION

Asseco Data Systems S.A. ("ADS") operates the Certification Authority (CA) services as enumerated in **Attachment A**, and provides Extended Validation SSL ("EV SSL") CA services.

The management of ADS is responsible for establishing and maintaining effective controls over its EV SSL CA operations, including its EV SSL CA business practices disclosure on its website <https://www.certum.pl/pl/repozytorium/>, EV SSL key lifecycle management controls, and EV SSL certificate lifecycle management controls. These controls contain monitoring mechanisms, and actions are taken to correct deficiencies identified.

There are inherent limitations in any controls, including the possibility of human error, and the circumvention or overriding of controls. Accordingly, even effective controls can only provide reasonable assurance with respect to ADS's Certification Authority operations. Furthermore, because of changes in conditions, the effectiveness of controls may vary over time.

ADS management has assessed its disclosures of its certificate practices and controls over its EV SSL CA services. Based on that assessment, in ADS management's opinion, in providing its EV SSL Certification Authority (CA) services in Szczecin, Poland, and supporting facilities in Łódź, Poland, throughout the period February 11, 2024 to February 10, 2025, ADS has:

- disclosed its extended validation SSL ("EV SSL") certificate lifecycle management business practices in its:
  - [Certification Practice Statement version 7.11](#); and
  - [Certification Policy version 5.1](#)

including its commitment to provide EV SSL certificates in conformity with the CA/Browser Forum Guidelines on the ADS website, and provided such services in accordance with its disclosed practices

- maintained effective controls to provide reasonable assurance that:
  - the integrity of keys and EV SSL certificates it manages is established and protected throughout their lifecycles; and
  - EV SSL subscriber information is properly authenticated (for the registration activities performed by ADS)

in accordance with the [WebTrust Principles and Criteria for Certification Authorities – Extended Validation SSL v1.8](#).

## Attachment B: List of Bugzilla issues noted during the period under review.

Mozilla Bug # Link	Description	Date Reported	Date Resolved	Criteria
<a href="#">1888689</a>	<p><b>Explanation about how and why the mistakes were made or bugs introduced, and how they avoided detection until now.</b>          49 of Asseco Data Systems' CRLs violated TLS BRs (v2.02): Section 7.2 and RFC 5280. These CRLs contained the revoked certificates field, however no revoked certificates were present. During the testing process, Certum did not detect that some CRLs disclosed to the CCADB were in violation of the TLS Baseline Requirements (BRs) and, by extension, RFC 5280. Specifically, these CRLs contained the revoked certificates field, but no revoked certificates were present. This was because Certum's testing was done on sample CRLs which did not include empty CRLs. Testing approach was to use pkilint on a limited number of samples, since Certum had configured the same profile for all the CRLs. Certum did not automate this testing process, but rather performed it manually. Certum made a wrong assumption that a few positive tests were enough to validate the CRLs. Certum overlooked the possibility of empty CRLs and did not include them as test scenarios.</p> <p><b>List of steps your CA is taking to resolve the situation and ensure such issuance will not be repeated in the future, accompanied with a timeline of when your CA expects to accomplish these things.</b>          CRL module was updated by 2024-04-05, Manual tests were performed with pkilint for all CRLs by 2024-04-05, Linting for CRLs issuing process was introduced.</p>	29.03. 2024	02.10. 2024	RFC 5280: Sect. 5.1.2.6 TLS BR 7.2
<a href="#">1935393</a>	<p><b>Explanation about how and why the mistakes were made or bugs introduced, and how they avoided detection until now.</b>          On December 3, 2024, a Certum employee reviewed the CCADB and identified errors that appeared after a recent website update. During the review of new features Certum found that the current Certification Policy is older than 365 days. According to Section 2.3 of the Baseline Requirements, the CA is required to annually update a Certificate Policy and/or Certification Practice Statement. Additionally, Section 4 of the Mozilla Root Store Policy requires updates to the CP and CPS at least once every 365 days. This requirement was not met. The root cause of the incident was a gap in internal procedures and the reliance on individual methods for handling the annual update of non-audit documents. Both the CP and CPS updates were manually managed by a single individual. The previous person responsible for the updates had their own approach, which was not standardized. As a result, while the CPS update was completed, the CP update was overlooked due to a lack of clarity in the process.</p> <p><b>List of steps your CA is taking to resolve the situation and ensure such issuance will not be repeated in the future, accompanied with a timeline of when your CA expects to accomplish these things.</b>          The procedure for documentation update was revised, specifying that the CP and CPS must be updated at least once every 365 days. An internal tracker for CP and CPS updates for employees responsible for the task was created. Update in the procedure for updating the CP and CPS. Creation of internal tracker for CP and CPS updates for employees responsible for the task.</p>	05.12. 2024	28.01. 2025	EV BR 9.3.4 BR 7.1.6.3

	Implementation of the script which compares the list of CP and CPS from CCADB public report and alerts if they are about to expire.			
<a href="#"><u>1909203</u></a>	<p><b>Explanation about how and why the mistakes were made or bugs introduced, and how they avoided detection until now.</b></p> <p>During scheduled network maintenance on 2024-07-21, Certum's infrastructure experienced a disruption that caused the unavailability. The scope of network maintenance concerned the replacement of network interfaces for networks within the organisation (part one of the work) and for public networks (part two of the work). The problem occurred during the second part of the network maintenance and was related to the incorrect setting of the route in the configuration. As a result, the following services were not available from the internet.</p> <p>The problem affected the following services which according to BR must be available 24x7:</p> <p>CP/CPS respond to revocation requests and Certificate Problem Report CRL OCSP</p> <p>The failure was resolved within about 1-2 hours, and since then all the services mentioned are working correctly.</p> <p>This incident did not affect the issuance of certificates.</p> <p><b>List of steps your CA is taking to resolve the situation and ensure such issuance will not be repeated in the future, accompanied with a timeline of when your CA expects to accomplish these things.</b></p> <p>Implement additional monitoring controls for network devices and traffic. Implement additional monitoring controls for services. Changing the configuration of CDN to automate traffic switching between Primary Origins Server and Secondary Origin Server. Add external monitoring for Certificate Problem Report. Improvements were implemented on time and strengthened controls which were insufficient to prevent this incident.</p>	22.07. 2024	04.09. 2024	BR 7.1.
