

INDEPENDENT ASSURANCE REPORT

To the management of Entrust Corporation ("Entrust"):

Scope

We have been engaged, in a reasonable assurance engagement, to report on Entrust management's [statement](#) that for its Certification Authority ("CA") operations in Ottawa, Ontario, Canada and Toronto, Ontario, Canada, throughout the period 1 March 2024 to 28 February 2025 (the "Period") for its CAs as enumerated in [Attachment A](#), Entrust has:

- disclosed its extended validation SSL ("EV SSL") certificate lifecycle management business practices in its
 - Certificate Policy/ Certification Practice Statements ("CP/CPS") as enumerated in [Attachment B](#), including its commitment to provide EV SSL certificates in conformity with the CA/Browser Forum Guidelines on the Entrust website, and provided such services in accordance with its disclosed practices
- maintained effective controls to provide reasonable assurance that:
 - the integrity of keys and EV SSL certificates it manages is established and protected throughout their lifecycles; and
 - EV SSL subscriber information is properly authenticated (for the registration activities performed by Entrust)

in accordance with the [WebTrust Principles and Criteria for Certification Authorities – Extended Validation SSL v1.8](#).

Certification authority's responsibilities

Entrust's management is responsible for its statement, including the fairness of its presentation, and the provision of its described services in accordance with the WebTrust Principles and Criteria for Certification Authorities – Extended Validation SSL v1.8.

Our independence and quality management

We have complied with the relevant rules of professional conduct / code of ethics applicable to the practice of public accounting and related to assurance engagements, issued by various professional accounting bodies, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

The firm applies Canadian Standard on Quality Management 1, *Quality Management for Firms that Perform Audits or Reviews of Financial Statements, or Other Assurance or Related Services Engagements*, which requires the firm to design, implement and operate a system of quality management, including policies or procedures regarding compliance with ethical requirements, professional standards, and applicable legal and regulatory requirements.

Practitioner's responsibilities

Our responsibility is to express an opinion on management's statement based on our procedures. We conducted our procedures in accordance with Canadian Standard on Assurance Engagements 3000, *Attestation Engagements Other than Audits or Reviews of Historical Financial Information*, set out in the CPA Canada Handbook – Assurance. This standard requires that we plan and perform our procedures to obtain reasonable assurance about whether, in all material respects, management's statement is fairly stated, and, accordingly, included:

- (1) obtaining an understanding of Entrust's key and certificate lifecycle management business practices and its controls over key and certificate integrity, over the authenticity and confidentiality of subscriber and relying party information, over the continuity of key and certificate lifecycle management operations and over development, maintenance and operation of systems integrity;
- (2) selectively testing transactions executed in accordance with disclosed key and certificate lifecycle management business practices;
- (3) testing and evaluating the operating effectiveness of the controls; and
- (4) performing such other procedures as we considered necessary in the circumstances.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Relative effectiveness of controls

The relative effectiveness and significance of specific controls at Entrust and their effect on assessments of control risk for subscribers and relying parties are dependent on their interaction with the controls, and other factors present at individual subscriber and relying party locations. We have performed no procedures to evaluate the effectiveness of controls at individual subscriber and relying party locations.

Inherent limitations

There are inherent limitations in the effectiveness of any system of internal control, including the possibility of human error and the circumvention of controls. For example, because of their nature, controls may not prevent, or detect unauthorised access to systems and information, or failure to comply with internal and external policies or requirements. Also, the projection to the future of any conclusions based on our findings is subject to the risk that controls may become ineffective.

Other matters

Without modifying our opinion, we noted the following other matters during our procedures:

Matter topic		Matter description
1	Updates to CPS Versions Addressing EV SSL Certificate Issues and Client Authentication	CPS V3.17 was updated on March 21, 2024, to correct mis-issued EV SSL certificates, as reported in Bugzilla 1883843. However, the update did not completely and accurately address details of Client Authentication, which was publicly disclosed in Bugzilla 1887753. Consequently, CPS V3.1.8 was updated on March 22, 2024.
2	Updates to CPS Version Addressing typographical (text placement) error	CPS V3.1.8 dated March 22, 2024, was updated to require the policyQualifier for the EV certificate profile, as reported in Bugzilla 1890896. However, it was inadvertently added to the OV certificate profile, where it is not required. This error was corrected in CPS V3.20 on March 26, 2024.

In course of our procedures, we have identified two records of the certificate related to CA#16 - L1K in ATTACHMENT A, with different SHA fingerprints. We have disclosed both of these records as Cert # 16.1 and Cert # 16.5 in ATTACHMENT A. We identified these records in crt.sh. Basis for qualified opinion

During our procedures, we noted the following which caused a qualification of our opinion:

#	Observation	Relevant WebTrust EV SSL Criteria
1	As publicly disclosed in Bugzilla 1883843, 1888714 and 1886467, there were non-compliant EV SSL certificates issued within the audit period, including: 26,644 EV SSL certificates were issued with cPSuri removed in the policy qualifiers; 1,969 out of that 26,644 impacted EV SSL certificates were issued without CP OID in the certificatePolicies extension; and 1176 EV SSL certificates issued without id-kp-serverAuth As a result, a criterion of 2.2.2 of Principle 2 WebTrust for Certification Authorities – Extended Validation SSL v1.8 has not been met.	P2 - 2.2.2: The CA maintains controls to provide reasonable assurance that EV SSL Certificates issued include the minimum requirements for the content of EV SSL Certificates, including: - Certificate Policy Identification requirements - Subscriber Public Key - Certificate Serial Number - Additional Technical Requirements for EV Certificates as established in the EV SSL Guidelines relating to: - EV SSL Subscriber Certificates - EV Subordinate CA Certificates

#	Observation	Relevant WebTrust EV SSL Criteria
2	As publicly disclosed in Bugzilla 1887705, regarding the mis-issued EV SSL certificates reported in Bugzilla 1883843, 1888714, and 1886467, Entrust did not revoke the impacted certificates within the required 5-day period. A total of 1,175 certificates were affected, and their revocation was delayed. As a result, a criterion of 5.3 of Principle 2 WebTrust for Certification Authorities – Extended Validation SSL v1.8 was not met.	P2 - 5.3: The CA maintains controls to provide reasonable assurance that Subscriber Certificates are revoked within 24 hours if any of the following events occurs: 1. The Subscriber requests in writing that the CA revoke the Certificate. 2. The Subscriber notifies the CA that the original certificate request was not authorized and does not retroactively grant authorization. 3. The CA obtains evidence that the Subscriber's Private Key corresponding to the Public Key in the Certificate suffered a Key Compromise; or 4. The CA obtains evidence that the validation of domain authorization or control for any Fully Qualified Domain Name or IP address in the Certificate should not be relied upon. And Subscriber Certificates are revoked within 5 days if any of the following events occurs: 1. The Certificate no longer complies with the requirements of SSL Baseline Requirements Sections 6.1.5 and 6.1.6. 2. The CA obtains evidence that the Certificate was misused. 3. The CA is made aware that a Subscriber has violated one or more of its material obligations under the Subscriber Agreement or Terms of Use; 4. The CA is made aware of any circumstance indicating that use of a Fully-Qualified Domain Name or IP address in the Certificate is no longer legally permitted (e.g., a court or arbitrator has revoked a Domain Name Registrant's right to use the Domain Name, a relevant licensing or services agreement between the Domain Name Registrant and the Applicant has terminated, or the Domain Name Registrant has failed to renew the Domain Name); 5. The CA is made aware that a Wildcard Certificate has been used to authenticate a fraudulently misleading subordinate Fully-Qualified Domain Name; 6. The CA is made aware of a material change in the information contained in the Certificate; 7. The CA is made aware that the Certificate was not issued in accordance with these Requirements or the CA's Certificate Policy or Certification Practice Statement; 8. The CA determines that any of the information appearing in the Certificate is inaccurate; 9. The CA's right to issue Certificates under these Requirements expires or is revoked or terminated, unless the CA has made arrangements to continue maintaining the CRL/OCSP Repository; 10. Revocation is required by the CA's Certificate Policy and/or Certification Practice Statement; or 11. The CA is made aware of a demonstrated or proven method that exposes the Subscriber's Private Key to compromise, methods have been developed that can easily calculate it based on the Public Key (such as a Debian weak key, see http://wiki.debian.org/SSLkeys), or if there is clear evidence that the specific method used to generate the Private Key was flawed.

#	Observation	Relevant WebTrust EV SSL Criteria
3	As publicly disclosed in Bugzilla 1890123 regarding the mis-issued EV SSL certificates reported in Bugzilla 1883843 and 1890898, a preliminary incident report was not provided within the required 24-hour timeframe. As publicly disclosed in Bugzilla 1885754, regarding mis-issued EV SSL certificates, Technical Support Specialist team did not provide a preliminary report to the Subscriber and the entity who filed the CPR within the required 24-hour timeframe. As a result, a criterion of 5.2 of Principle 2 of WebTrust for Certification Authorities – Extended Validation SSL v1.8 has not been met.	P2 – 5.2 The CA maintains controls to provide reasonable assurance that it: •has the capability to accept and acknowledge Certificate Problem Reports on a 24x7 basis; •identifies high priority Certificate Problem Reports; •begin investigation of Certificate Problem Reports within 24 hours and provide a preliminary report on its findings to both the Subscriber and the entity who filed the Certificate Problem Report; •decides whether revocation or other appropriate action is warranted. •if revocation is deemed the appropriate action, the elapsed time from receipt of the Certificate Problem Report or revocation request and revocation status information does not exceed the timelines in SSL Baseline Requirements 4.9.1.1; and •where appropriate, forwards such complaints to law enforcement.

Opinion

In our opinion, except for the other matters described in the table presented in the ‘Basis for qualified opinion’ section above, throughout the period 1 March 2024 to 28 February 2025, Entrust management’s statement, as referred to above, is fairly stated, in all material respects, in accordance with the WebTrust Principles and Criteria for Certification Authorities – SSL Baseline with Extended Validation SSL v1.8.

This report does not include any representation as to the quality of Entrust’s services beyond those covered by the WebTrust Principles and Criteria for Certification Authorities – Extended Validation SSL v1.8, nor the suitability of any of Entrust’s services for any customer’s intended purpose.

Use of the WebTrust seal

Entrust’s use of the WebTrust for Certification Authorities Seal constitutes a symbolic representation of the contents of this report and it is not intended, nor should it be construed, to update this report or provide any additional assurance.

ENTRUST MANAGEMENT'S STATEMENT

Entrust Corporation ("Entrust") operates the Certification Authority ("CA") services as enumerated in [Attachment A](#), and provides the following CA services:

- Subscriber registration
- Certificate renewal
- Certificate rekey
- Certificate issuance
- Certificate distribution
- Certificate revocation
- Certificate validation
- Subscriber key generation and management
- Subordinate CA cross-certification

The management of Entrust is responsible for establishing and maintaining effective controls over its CA operations, including its CA business practices disclosure on its [website](#), CA business practices management, CA environmental controls, CA key lifecycle management controls, subscriber key lifecycle management controls, certificate lifecycle management controls, and subordinate CA certificate lifecycle management controls. These controls contain monitoring mechanisms, and actions are taken to correct deficiencies identified.

There are inherent limitations in any controls, including the possibility of human error, and the circumvention or overriding of controls. Accordingly, even effective controls can only provide reasonable assurance with respect to Entrust's Certification Authority operations. Furthermore, because of changes in conditions, the effectiveness of controls may vary over time.

Entrust management has assessed its disclosures of its certificate practices and controls over its CA services. Based on that assessment, in Entrust management's opinion, in providing its CA services at Ottawa, Ontario, Canada and Toronto, Ontario, Canada throughout the period 1 March 2024 to 28 February 2025, Entrust has:

- disclosed its EV SSL certificate lifecycle management business practices in its:
 - Certificate Policy/Certification Practice Statements ("CP/CPS") as enumerated in [Attachment B](#) including its commitment to provide EV SSL certificates in conformity with the CA/Browser Forum Guidelines on the Entrust website, and provided such services in accordance with its disclosed practices
- maintained effective controls to provide reasonable assurance that:
 - the integrity of keys and EV SSL certificates it manages is established and protected throughout their lifecycles; and
 - EV SSL subscriber information is properly authenticated (for the registration activities performed by Entrust)

in accordance with the [WebTrust Principles and Criteria for Certification Authorities – Extended Validation SSL v1.8](#).

Entrust management has also reported the following 'bugs' on Mozilla's Bugzilla reporting system:

Bug ID	Summary	Opened	Closed
1883843	EV TLS Certificate cPSuri missing	3/6/2024	8/13/2024
1886467	ClientAuth TLS Certificates without serverAuth EKU	3/20/2024	6/28/2024
1888714	EV Certificate missing Issuer's EV Policy OID	3/29/2024	7/11/2024
1885754	CPR was not responded to in 24 hours	3/16/2024	9/13/2024
1890123	Failed to provide a preliminary incident report according to TLS BR 4.9.5	4/6/2024	8/13/2024
1887705	Delayed revocation of clientAuth TLS Certificates without serverAuth EKU	3/25/2024	7/5/2024
1887753	Late CPS Update	3/25/2024	7/12/2024

A handwritten signature in black ink that reads 'Bruce Morton'.

Bruce Morton
Director, Entrust Certificate Services
